EDUCATION

Jadavpur University **2022 – 2026**
Bachelor of Engineering in Information Technology *CGPA : 7.35*

Kendriya Vidyalaya, IIT Kharagpur **2022**
Class XII : Science *CBSE : 88.6%*

Kendriya Vidyalaya, IIT Kharagpur **2020**
Class X *CBSE : 94.6%*

COURSEWORK

- Operating System
- Object Oriented Programming
- Data Structures & Algorithms
- Database Management System
- Computer Networks
- Web Technologies

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL
AI/LLM: LangChain, LangGraph, RAG, Prompt Engineering, Claude
Backend: FastAPI, Node.js, Express.js, REST APIs
Frontend: React, HTML, CSS
Databases: MongoDB, PostgreSQL/MySQL, Neo4j
Tools: Git, GitHub, Linux, VS Code, Cursor, Azure ML

EXPERIENCE

ITC Infotech **January 2026 – Present**
AI Engineer Intern

- Designed and developed AI agents for ITC's internal K-Fabric platform using Python, FastAPI, and LLM-based workflows to automate software development lifecycle tasks.
- Built a **Coding Standards Enforcer Agent** that analyzes repositories, detects coding guideline violations, generates contextual feedback, and pushes recommendations directly into pull request discussions.
- Developed a **Build Orchestration Agent** to automate build execution workflows, monitor pipeline states, trigger dependent tasks, and reduce manual intervention in build management.
- Implemented a **Dependency Resolver Agent** using agentic workflows and LLM reasoning to analyze dependency files, identify version conflicts, suggest fixes, and support human-in-the-loop validation.
- Built modular orchestration pipelines using FastAPI and Python with extensible agent architecture, enabling independent capability additions without changing core components.

PROJECTS

NovaMed | Group Project | React, Node.js, Express, MongoDB, Stripe, Razorpay **Live site**

- Group project: full-stack doctor booking app (React, Node.js/Express, MongoDB) with separate flows for patients, doctors, and admins to manage appointments.
- Handled authentication, user role separation, and REST APIs across three distinct user types.
- Took end-to-end ownership of the appointment flow — booking, confirmation, and payment via Stripe and Razorpay.
- Built the doctor management backend: appointment models, auth middleware, and file upload handling with Multer.

PhoneSay | React, Stream SDK, Node.js, MongoDB **Live site**

- Built a language-learning app where users get matched by language, then chat or video call in real time via Stream SDK.
- Backend uses JWT cookie auth, bcrypt for password storage, and REST APIs; user onboarding handled at signup.
- Frontend built with Zustand and React Query; shipped with 30+ TailwindCSS/DaisyUI themes — admittedly more fun to build than strictly necessary.
